AIM AND SCOPE

International Journal of Computer Applications (LCA) is an open access international journal peer reviewed online and print journal that publishes articles in the field of Compute Science, Computational Mathematics, Computer Engineering and Scientific Computing Software Engineering, Neural Networks, Nano Technology, Natural language processing and Information retrieval, includes Algorithm and Computational complexity; Compute architecture and High performance computing: distributed and grid computing; Human computer interaction; Information security: Pattern recognition and image processing; VLS design and testing: Artificial intelligence; Dependable computing, etc.

JOURNAL DESCRIPTION

The papers for publication in IJCA are selected through rigorous peer reviews to ensum originality, timeliness, relevance, and readability. While it emphasizes publication previously unpublished materials, selected conference papers with exceptional merit tha require wider exposure are, at the discretion of the editors, also published provided they me the journal's peer review standard.

SUBJECT AREA

- IJCA is the place for exchange of information and research results within the following scope:
- Computer Science
- Computational Mathematics.
- Computer Engineering and Scientific Computing
- Software Engineering Neural Networks
- Nano Technology
- Natural language processing and Information retrieval includes Algorithm and Computational complexity
- Computer architecture and High performance computing
- Distributed and grid computing
- Human-computer interaction
- Information security
- Pattern recognition and image processing
- VISI design and testing

- Artificial intelligence

Dependable computing
